prognostic factors in  
gastric cancer. Despite  
the therapeutic  
advances that have  
been achieved in the

---

past three decades, the overall survival of patients with gastric cancer is still poor. The clinico-pathological prognostic factors for gastric cancer include tumor location, size, degree of differentiation, lymph node metastasis, depth of invasion, distant

---

metastasis, tumor necrosis, and venous invasion. Some studies have suggested that age, gender, and histologic type should also be considered for predicting prognosis. Among these prognostic factors, tumor size, degree of differentiation, depth

---

of invasion, lymph node metastasis, and tumor necrosis are well recognized. However, there is little evidence supporting the prognostic value of age, gender, tumor location, or venous invasion. Since clinicopathologic factors do not fully

---

predict the clinical outcome of patients with gastric cancer, the development of novel prognostic factors that can be readily available in clinical practice is a top priority in gastric cancer. This article reviews the clinicopathological prognostic factors of

---

gastric cancer and discusses the potential of newer prognostic factors. Rep.

Alexandria Ocasio-Cortez came for President Trump's Twitter habit on Saturday, calling it “a public health crisis” and pledging to get rid of the “cancerous

---

tumor” if she is elected to office.
