CasaTunes is a browser-based software, that enables you to configure the music players throughout your entire house. You can set it up to play music from several different sources and fully control the songs that play in each room. Set up rooms and sources CasaTunes is compatible with several types of streamers, and you can even set it up via the server. You can listen to music from the selected source, from your computer, iTunes, NUVO libraries, or you can set up AirPlay, in order to play songs from your iPod, iPad and iPhone. You can manage CasaTunes with the browser, or using the selected accessories, in order to view the queue of songs, to add or remove melodies and to adjust the volume or playback. Additionally, you can use the application's built-in radio utility, that enables you to listen to world broadcast from any room in your house. Internet music CasaTunes works with several online music services, such as iNetCustom, SHOUTcast or Spotify, in order to bring to you fresh playlists. You can set the selected service to play on all sources or just in your room. Moreover, you can access CasaTunes remotely, by using a dedicated server. You can create your own server configuration, in order to activate and control the application or you can connect to the default CasaTunes UltraVNC. You may decide whether you wish to grant access and control privileges to third parties. Sleep and wake up CasaTunes also works as a morning alarm, thanks to its Wake function, that allows it to start automatically at the specified time each day. Similarly, if you do not have time to shut it down manually, you can set a sleep timer and be sure the application shuts down at the desired moment. Next up in our series of Best Home Automation Apps reviews, we look at the Editors' Choice award-winner, MAX. Control everything in your home from your phone or tablet device! This versatile Android app is an excellent companion to MAX, our favorite remote control app. The MAX App keeps you on track by providing a nice weather-sensing slider, so you can shut off your thermostat when it's storming. This app also has a wide range of features that let you monitor your home's status and activities from any of your devices. Plus, its extensive documentation and its "Help"
